P-1248	door trim	1 x 2F x 48	1	
P-1257	wood roof strip	1 x 2 x 57	6	

SKYLIGHT PANEL INSTALLATION

First take the corrugated plastic panels and make sure to identify the UV protected side (this will be the printed film side). This will be the side that will be exposed to the elements and the sun. Take the two layers of film off (there is a clear film on the underside of the panel as well) and lay them over top of the open roof rafters and battens. Make sure to slide the plastic sheet underneath the wood shingles located at the top of the roof panel. The bottom edge of the plastic sheets will overhang the end of the rafters by 2 inches (5 cm). See Fig SL-001 for details

Once the roof panels are in place then take the foam tape and cut them into 56 1/2 inch (144 cm) length. Remove the plastic film to reveal the sticky side. Affix each piece of foam tape on top of the rafter locations.

Take the wood strips and pre-drill the holes using a 1/16" drill bit. Please refer to Fig SL-002 for details.

Using the 6 neoprene washer and 2" screws attach each of the wood strips on top of the foam tape.
